

## Information Technology Intern Project Ideas

No matter what industry you are in, any business field can benefit from utilizing interns to their fullest potential. One of the many myths about internships is that employers cannot find the time to delegate meaningful work to their interns. The reality is that through thoughtful organization, a great number of assignments and tasks can be given to interns to save employers both time and labor. Below is a list of responsibilities, or “real work” that interns can do in the IT/computer field:

- Work with users and development teams to design, implement, and manage the latest technology
- Collaborate with business partners to gather requirements
- Analyze requirements and create design discussions with development teams
- Drive key decisions regarding the scope and the schedule
- Test computing technology, platforms, and devices
- Attend meetings with the development team to help unify the over-all understanding of the project
- Critique programs and processes to constantly improve the technologies
- Help identify and maintain the new generation products and services customers desire
- Program database solutions
- Logical data modeling
- Web-design development
- Implement software solutions
- Help manage work orders / service ‘tickets’
- Write user manuals and directions
- Perform system maintenance
- Develop / test a new product
- Conduct industry research
